

ORKIN GREEN PEST CONTROL

USING THE ENVIRONMENT TO HELP MANAGE PESTS

ORKIN'S GREEN PRODUCTS

Orkin uses products developed with the latest technology for long-term results. Featuring botanical oils, our products are cost-efficient, easy to use and fight a broad spectrum of pests – from cockroaches to wasps to ants – while supporting the highest standards of safety.

Using a variety of product formulations, such as residual dust, aerosol, powder, granule and liquid concentrate, we can provide facilities with products that are:

- EPA-registered (if required)
- University, lab and field tested
- Proven to cause quick knockdown/kill
- National Organic Program compliant
- Free from harmful residuals
- For both interior and exterior use
- Unscented or mild in fragrance
- Consistent with LEED standards for property management

The manufacturer of Orkin's green products is an H2E (Hospitals for a Healthy Environment) Partner working to improve health care environments.

MINIMUM-RISK PRODUCTS

Orkin offers a selection of products designated by the EPA as "minimum-risk." Containing only "food-grade" ingredients, minimum-risk products pose no risk to food safety, humans or the environment and are exempt from EPA registration.

Orkin also offers its signature cleaner, Orkin Environmental-30 (OE-30), which uses the latest biotechnology to break down grease and grime. An organic, non-corrosive, non-toxic, non-pathogenic product, OE-30 can penetrate even the smallest cracks and crevices in flooring to help keep facilities sparkling clean.

ORGANIC FACILITIES

To meet the needs of customers certified by the National Organic Program (NOP), Orkin's Technical Services Department developed an IPM program tailored specifically for organic facilities. Our Commercial Pest Specialists work closely with organic-certified facilities to comply with even the strictest NOP regulations.

"Orkin spent a great deal of time with us to make sure everything was perfect. We passed our annual food safety audit with flying colors, earning a perfect pest control score."

- Dave Boyer, Director of Operations, Tree of Life, Inc.

ORKIN GREEN PEST CONTROL

USING THE ENVIRONMENT TO HELP MANAGE PESTS

Orkin's Integrated Pest Management (IPM) programs emphasize non-chemical control techniques like sanitation and structural maintenance to help prevent pest infestations before they start. When more action is needed, Orkin offers a full line of environmentally friendly treatments for our customers who want to go above and beyond to uphold the highest environmental standards.

ORKIN'S COMMITMENT

As a leader in designing and implementing "true" IPM programs, Orkin is committed to managing all pests with the least threat to humans, non-target organisms and the environment. Our experienced Technical Services Department includes board-certified entomologists and Ph.D.s who take the greatest care in selecting the best and most effective green products on the market.

Orkin has a green program for everyone. Whether our customers want to maintain National Organic Program certification, improve food safety, decrease toxic risks to employees and guests, or be a friend to nature, we work with them to use the green products that are right for their facilities.

BEING GREEN AT YOUR FACILITY

Orkin has the best-trained pest specialists in the business. Every one of our Commercial Pest Specialists undergoes intensive training to learn proper product application. When chemical treatments are needed, your Orkin Man can apply our eco-friendly products in targeted amounts and areas to combat specific pest infestations so you'll get results, not repercussions.

FACT: ORKIN'S GREEN PEST CONTROL PROGRAM EFFECTIVELY MANAGES PESTS WITH CAREFUL AND RELIABLE METHODS AND ENVIRONMENTALLY FRIENDLY PRODUCTS.
